Notice of Large-scale Order

Digital Media Professionals Inc. acquired large-scale order of RS1, image processing semiconductor for the amusement market as described below.

1. Details of the order

RS1 is the first in the pachinko/pachislot industry to integrate a real-time 3D engine and a high-performance, high-compression video engine on a single chip, which not only enables beautiful and realistic video expression required for next-generation entertainment, but also helps customers reduce the cost of pachinko/pachislot machine chassis. Mass production shipments began in the fiscal year ended March 2018, and cumulative sales of 1,645 million yen have been recorded through the fiscal year ended March 2021.

The latest order amounts to 979 million yen, which will be delivered to the customer from the second to the fourth quarter of the current fiscal year.

2. Future outlook

The above order amount plus the sales of 171 million yen for RS1 in the first quarter totals 1,150 million yen, exceeding the sales of 840 million yen for RS1, which was included in the consolidated business forecast for the fiscal year ending March 31, 2022 announced on May 14, 2021. The impact of the order on the consolidated business forecast for the current fiscal year will be closely examined, and if there is anything that needs to be disclosed, it will be announced promptly.

We will strive to expand our market share in the market segments where we can demonstrate the superiority of RS1, our unique 2D/3D integrated chip.
